

## About Abeo

Abeo was formed in 1997 to provide engineering and systems integration services to the United States Navy. Over time, we have consolidated our position as a technology integrator obsessed with flawless execution and customer satisfaction.

## Advanced Consulting Services (ACS)

ACS is the branch of Abeo that works with clients to maximize their technology investment and help them improve business performance.

- Systems integration
- Project management
- Network engineering
- Information security
- Human performance
- Change management
- Process re-engineering
- Cost-benefit analysis

## ACS Customers

- IBM – Intrusion detection, scanning, and security assessments
- JPMorgan Chase – Anti-virus software implementation
- META Associates – Network implementation and administration
- Cities of Oceanside & Petaluma, CA – Network installation
- Accenture – Cost-benefit analysis, systems engineering simulation
- Transportation Security Administration – Training technology consulting

## Information Security

Abeo has extensive information security capabilities honed at clients such as JPMorgan Chase and IBM. We can deploy project teams or individual certified experts to handle your information security needs.

- **Intrusion detection**  
Abeo can provide a comprehensive threat detection system that monitors for intrusions and suspicious activity anywhere within your network.
- **Intrusion detection monitoring**  
If you seek the highest level of security for your network, Abeo can provide 24/7 monitoring that learns the behavioral pattern of your network and adapts as the network changes. Using information from existing host and network intrusion detection devices over weeks and months, we can correlate that information through hundreds of comparative analyses using thousands of algorithms to detect anomalous activity. That allows us to find trends and escalate true intrusion attempts to your organization for appropriate action.
- **Antivirus software installation and virus removal services**  
Abeo can help your organization defend itself against internet virus attacks. There is a wide array of tools available to combat computer viruses in your organization. From corporate wide anti-virus server installations to individual workstation protection, Abeo can help you find the best solution.
- **Security policy and standards compliance**  
Abeo can help your organization comply with regulatory guidelines and lower operating costs through the consistent deployment of security policies and procedures.
- **Security audits and vulnerability assessments**  
Security experts at Abeo can do a full security audit of your organization from the ground up to reveal possible weaknesses in your security policy before they are exploited. This includes outside penetration testing, password evaluation, network sniffing, and a host of other tests to evaluate the security of your organization.
- **Security architecture design**  
Security does not exist in a vacuum, and Abeo believes a proactive and comprehensive security architecture is the surest path to protection, productivity, and lower operating costs for your organization.
